

TITLE

RFP TrustRoom makes RFP response work visible, bounded, and review

A hackathon working prototype where specialized agents coordinate through Band-style handoffs to build an evidence-backed answer path

PROOF OBJECT

Hybrid cover: real replay dashboard plus Intake -> Evidence -> Draft -> Review -> Approval -> Final Pack path.

RFP and security questionnaires fail at the handoff, not only at generation.

Sales, security, product, legal and SME reviewers need fresh evidence, bounded wording, and visible accountability.

Sales asks for commitment

Risk: copy outruns evidence

Security hunts evidence

Risk: stale or conflicting docs

Legal bounds wording

Risk: unconditional promises

SME approves scope

Risk: approval not scoped

Proposal owner packs response

Risk: blocked item gets hidden

PROOF OBJECT

Before-state workflow: scattered requests, stale evidence and risky commitments.

Band is the coordination layer, not a final notification channel.

The demo path shows sender -> receiver transitions, shared task states and a human approval gate.

orchestrator

assigns and packs

decomposer

splits requirements

retriever

finds evidence

drafter

writes bounded draft

reviewer

challenges risk

human approver

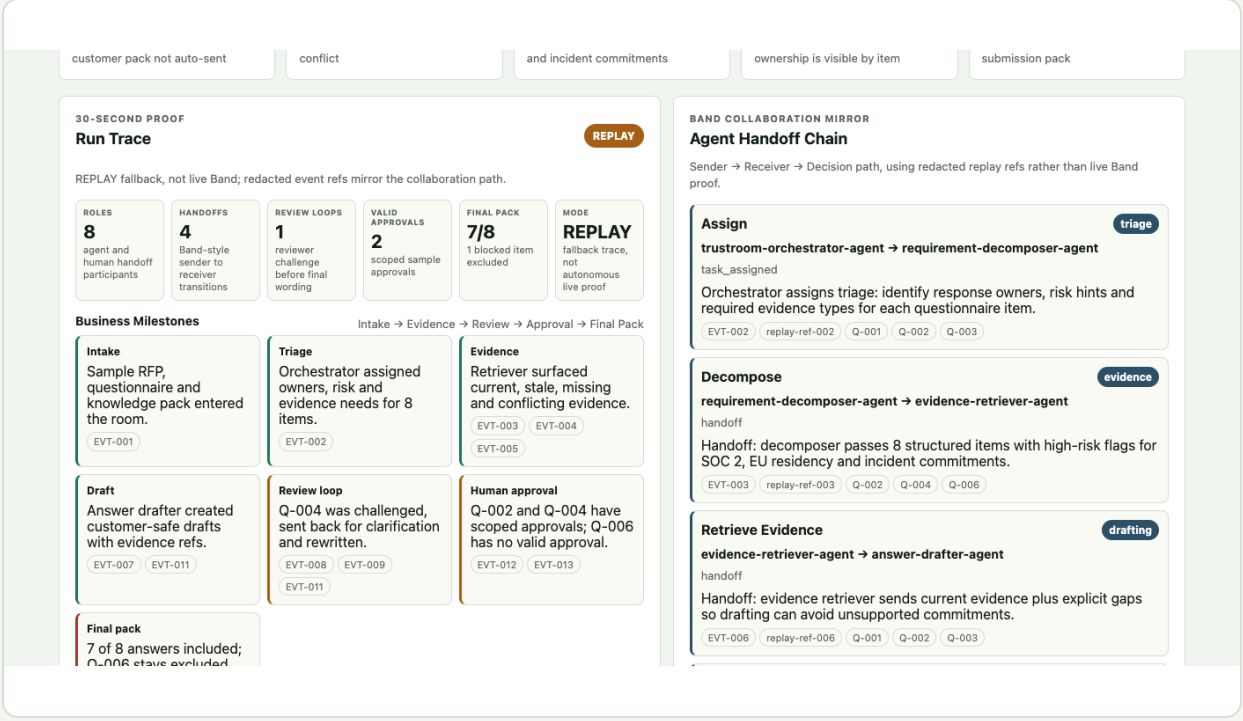

scopes approval

PROOF OBJECT

Agent chain: orchestrator -> decomposer -> retriever -> drafter -> reviewer -> human approver.

Judges can verify the workflow from the first screen.

The route starts with Executive Decision, proof strip, Business Milestones and Agent Handoff Chain before raw logs.

PROOF OBJECT

Screenshot crop: Run Trace, milestones, handoff chain and replay boundary.

The system treats happy path, review loop, and blocker path differently.

Q-002 is approved with scoped SME context; Q-004 is rewritten after review and legal approval; Q-006 is excluded.

REPRESENTATIVE ITEM TRACES

Representative Item Traces

Q-002 / Q-004 / Q-006 decision paths

Approval evidence refs are visible reviewer context, not a machine-enforced evidence-set gate.

included

Q-002

SOC 2 approval path

Valid scoped SME approval; included with bridge-letter boundary.

Task Assigned

tristeam-orchestrator-agent → requirement-decomposer-agent

Orchestrator assigns triage: identify response owners, risk hints and required evidence types for each questionnaire item.

EVT-002 | replay-ref-002 | Q-001 | Q-002

Handoff

requirement-decomposer-agent → evidence-retriever-agent

Handoff: decomposer passes 8 structured items with high-risk flags for SOC 2, EU residency and incident commitments.

EVT-003 | replay-ref-003 | Q-002 | Q-004

Evidence Found

evidence

included

Q-004

Region review loop

Reviewer challenged overbroad language; legal approved bounded pilot wording.

Review Decision

compliance-review-agent → answer-drafter-agent

Review request_changes: EU residency wording overreaches beyond evidence and must be rewritten with a legal approval note.

EVT-008 | replay-ref-008 | Q-004 | A-004

Handoff

evidence

compliance-review-agent → evidence-retriever-agent

Review loop: compliance sends Q-004 back to evidence retriever to confirm what can safely be said about region-restricted processing.

EVT-009 | replay-ref-009 | Q-004

Draft Created

review

answer-drafter-agent → compliance-review-agent

Revised draft created for Q-004 with explicit

excluded

Q-006

Incident blocker path

Stale/conflicting evidence plus no valid approval; final pack excluded.

Evidence Found

evidence

evidence-retriever-agent → trustroom-orchestrator-agent

Evidence coverage update: EU residency has an explicit gap note and incident response evidence is stale or conflicting.

EVT-005 | replay-ref-005 | EV-006 | EV-009

Review Decision

approval

compliance-review-agent → sme-approver

Approval queue update: high-risk SOC 2 and incident response answers require SME or security approval before final pack inclusion.

EVT-012 | replay-ref-012 | Q-002 | Q-006

Human gate

approval

sme-approver → trustroom-orchestrator-agent

Human approval: SOC 2 bridge-letter wording

PROOF OBJECT

Representative Item Traces for Q-002, Q-004 and Q-006.

RFP TrustRoom - Band of Agents Hackathon

5/8

High-risk commitments stay out of the pack without valid scoped approval

Q-006 has stale/conflicting evidence, no valid approval, final exclusion and a policy-owner follow-up.

Stale/conflicting incident evidence

EV-006 and EV-010 disagree

Needs human approval

High-risk commitment cannot pass alone

No valid approval

Q-006 has no scoped approval

Final pack excluded

Unsafe commitment stays out

Policy owner next action

Confirm current notification language

PROOF OBJECT

Blocked Impact Path plus approval validity language.

The output is a traceable answer pack, not just generated prose.

Included answers carry evidence, review and approval content
answers keep next actions visible.

7/8

answers included

1

blocked item retained

REPLAY

fallback, not live proof

Evidence

titles, snippets, freshness

Approval

role, scope, validity

Refs

redacted event IDs

PROOF OBJECT

Final Pack, evidence index, event refs and replay/live boundary.

A lightweight prototype keeps the demo stable without broadening live claims.

FastAPI dashboard, public-safe mock/replay, Band REST boundary verified separately, autonomous replies remain a separate gate.

FastAPI dashboard

Public-safe app shell

Mock/replay route

Stable judge path

Band REST boundary

Verified separately

Autonomous reply gate

Not claimed until connected peer passes

PROOF OBJECT

Architecture map and no-overclaim footer.
